

I. GENERAL

This project involves the installation of a temporary traffic signal for Stage 3 MOT at the intersection of MD 144 (Frederick Road) and I-695 SB Ramps in Baltimore county. The temporary traffic shall utilize span wire attached to temporary wood poles.

II. INTERSECTION OPERATION

1. The existing base mounted controller cabinet will be utilized at this location. This intersection will continue to operate in a fully actuated mode using 4 NEMA phases. Eastbound and Westbound MD 144 (Frederick Road) operates concurrently, while the side street movement operates with split phasing. An alternate pedestrian phase will be provided for the east of the intersection.

NOTES

- For final pavement markings, refer to MOT and /or pavement marking plans, as applicable; other than those detailed on the plan. All pavement markings shall be installed in accordance with Administration standards.
- The contractor shall be responsible for terminating all signal cable to the appropriate terminals and properly labeling each cable.
- All underground and overhead utilities shown on these plans are schematic only and may not be complete. The Contractor shall be responsible for notifying Miss Utility prior to construction so that all utilities may be located in the field. If the Contractor perceives that a conflict between the utilities and the traffic signal will occur, the Contractor shall notify the Project Engineer immediately so that the conflict may be resolved.
- The contractor shall maintain the continuous operation of all vehicular detectors, and lighting devices. If any device is damaged by the contractor, it shall be repaired within 72 hours by the contractor at no cost to the Administration after notification by the Engineer.
- The contractor shall contact the SHA Signal Shop at (410)-787-7650 at least 72 hours prior to starting construction for this phase.

APS NOTES

- The APS Push Buttons shall be delivered to SHA Signal Shop at least two (2) weeks prior to beginning work, so that the programming may be checked.
- APS will function as follows:  
To cross Frederick Road  
a. When pedestrian locates and presses pushbutton for an extended time, the message will be "Wait to cross Frederick at Ramps and Woodlawn, Wait." at first.  
b. When WALK phase begins, the message will be a rapid tick which will last for the duration of the WALK phase.
- Pushbuttons are to be located so that they can be activated by a person in a wheelchair reaching less than 18" from a 60" x 60" level landing area with a cross slope of less than or equal to two percent (2%).
- The 10' separation between pushbuttons is to be measured from face of pushbutton to face of pushbutton, not from center of pole to center of pole.
- Pushbutton arrows are to be parallel to the crossing for which they are intended.
- Location of accessible pedestrian signal pushbuttons must meet location requirements of MUTCD Sec. 4E.09 and Fig. 4E.2 and the NCHRP Publication, "Accessible Pedestrian Signals: Guide to Best Practice". If not met, the Contractor is to stop work on pushbutton locations until a design waiver is obtained, approved by the Director, Office of Traffic and Safety.
